

Field methods school

WHY IS THIS COURSE IMPORTANT?

This three-day course will review and provide participants with hands-on experience in a selection of common and novel techniques used to monitor and characterise groundwater systems and surface water-groundwater interactions. Short presentations and reading material will provide a theoretical background, after which the techniques will be applied in a series of informative, practical field trips.

WHO SHOULD ATTEND?

The field methods school is a practical course intended for water industry professionals including field technicians, NRM boards, water utility operators, mining sector staff, ecologists, hydrographers, compliance officers, hydrogeologists and hydrologists who wish to further develop their fieldwork skills. It assumes a low level of prior technical groundwater knowledge and will suit all backgrounds and interests.

WHO IS PRESENTING?

Lectures, demonstrations and tutorials are given by leading groundwater professionals. Our presenters are experienced hydrogeologists and specialists in both public and private practice, from industry, universities and research agencies and include:

Dr Glenn Harrington, Principal Hydrogeologist, Innovative Groundwater Solutions

Dr Ilka Wallis, Senior Lecturer, Flinders University

Daniel Wohling, Senior Hydrogeologist, Innovative Groundwater Solutions

Dr Jordi Batlle-Aguilar, Senior Hydrogeologist, Innovative Groundwater Solutions

We welcome any suggestions from delegates on specific topics you would like to see explored. Please email comments to: enquires@groundwater.com.au
